

VIRTUAL IDENTITY SERVER FOR OFFICE 365™

GET TO THE CLOUD FASTER, WITH
ADDITIONAL SECURITY, FEATURES & FUNCTIONALITY

A Global Provider of Identity & Access Management Solutions

EVERY DAY, MILLIONS OF USERS WORLDWIDE DEPEND ON OPTIMAL IDM SOLUTIONS FOR THEIR SECURITY, COMPLIANCE AND IDENTITY MANAGEMENT NEEDS.

MICROSOFT OFFICE 365

This allows you access to cloud-based email, web conferencing, file sharing and Office applications for a flat monthly cost, eliminating the need for on-premise servers to provide this functionality.

FOR ENTERPRISES

The move to the cloud is a slow and difficult process taking months to complete. There are also many barriers to Office 365 adoption. The Virtual Identity Server (VIS) for Office 365 not only eliminates the most common Office 365 barriers, but also provides for a rapid cloud deployment; slashing implementation times from multiple months to days.

Whether you have multiple Active Directory (AD) Forests or use a directory such as Novell's e-Directory, VIS for Office 365 can quickly and easily take your users to the cloud wherever they reside.

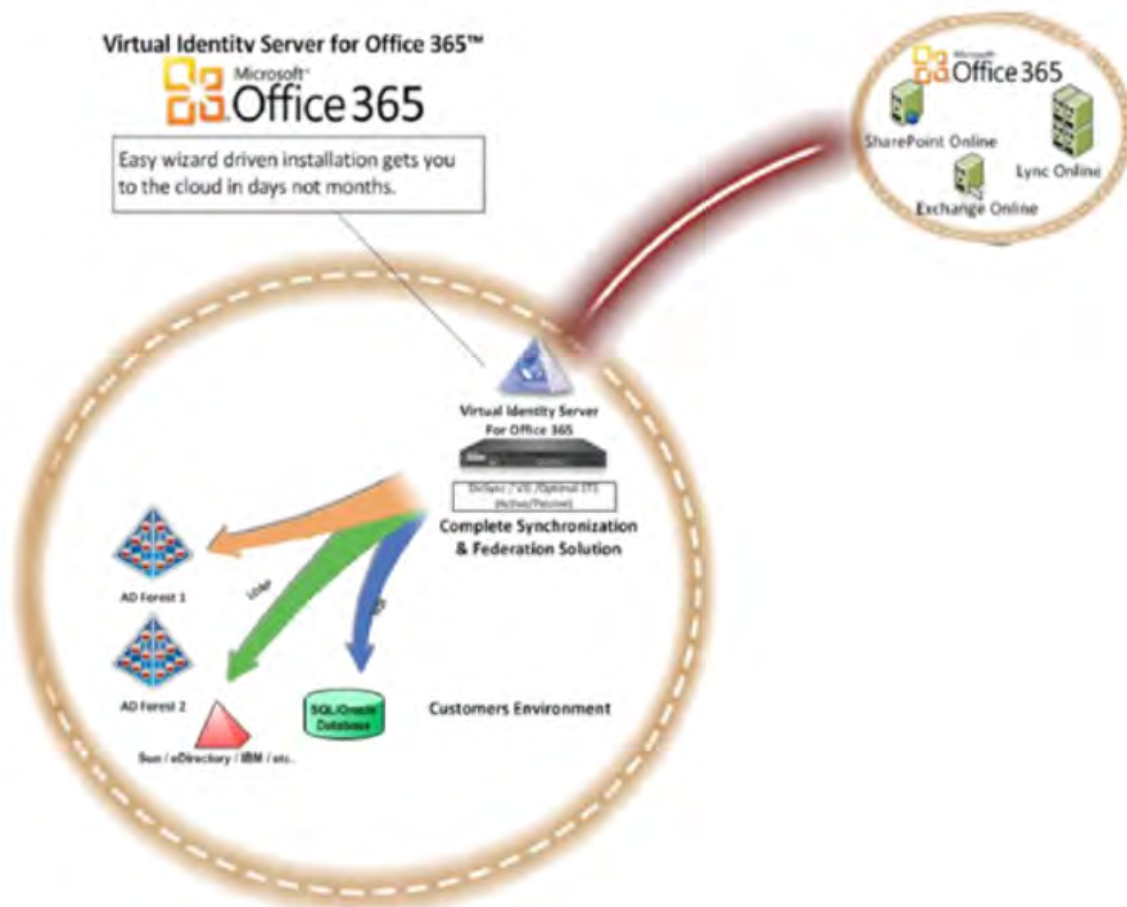

VIS FOR OFFICE 365

VIS for Office 365 is a complete end-to-end solution including: synching users/groups, filtering or translating the data as it is synched (and during authentication), as well as complete audit logging and denial of service (DoS) capabilities.

FEDERATION COMPONENTS

The VIS for Office 365 federation components not only provide out of the box two-factor authentication to Office 365 but also enables customers who otherwise couldn't go to the cloud (e.g. eDirectory or multi-forest).

DEPLOY OFFICE 365 FASTER, WITH INCREASED SECURITY, FEATURES AND FUNCTIONALITY

ROLL OUT IN DAYS NOT MONTHS, REGARDLESS OF NUMBER OF DIRECTORIES OR FORESTS

INCREASED SECURITY WITH CLOUD FIREWALL AND DATA-LEAKAGE PREVENTION

SIGNIFICANTLY REDUCES THE COMPLEXITY OF AN OFFICE 365 DEPLOYMENT

EXTENDING OFFICE 365 WITH POWERFUL MULTI-FOREST, MULTI-PLATFORM, TWO-FACTOR AUTHENTICATION AND DENIAL OF SERVICE PREVENTION/DETECTION CAPABILITIES.

BENEFITS

FAST & EASY MULTI-FOREST SOLUTION

VIS for Office 365 quickly and easily connects to all of your Active Directory (AD) forests to easily synchronize your data to the cloud without requiring any on premise consolidation. The solution also provides Single Sign-On (SSO) to Office 365 across all AD forests, both trusted and untrusted.

MULTI-PLATFORM SUPPORT (BEYOND AD)

The move to the cloud is a slow and difficult process taking months to complete. There are also many barriers to Office 365 adoption. The Virtual Identity Server for Office 365 not only eliminates the most common Office 365 barriers, but also provides for a rapid cloud deployment; slashing implementation times from multiple months to days.

BUILT-IN CLOUD FIREWALL

Allows administrators to filter out and decide what data is synchronized to the cloud. With Office 365 alone, all users and groups are synchronized to the cloud.

TWO-FACTOR AUTHENTICATION

Enables strong authentication to Office 365 applications, using common two-factor authentication methods such as: Time-based One-Time Password (TOTP), PUSH, client certificates, SMS/Phone, SecurID, or other methods with the built-in extensible framework.

RAPID OFFICE 365 DEPLOYMENT

Rollout Office 365 in days, not months, regardless of the number of directories/forests.

DENIAL OF SERVICE (DOS) DETECTION AND PREVENTION

Automatically detects and prevents denial-of-service attacks by locking out account virtually so the internal AD accounts remain functional.

AUTOMATED LICENSE ASSIGNMENT

Reduces administration time by automating license assignment.

DETAILED AUDITING

As users authenticate to the cloud, VIS for Office 365 automatically logs who authenticated, when and with what claims to a SQL database. Administrators can use the out-of-the-box reports or use their favorite reporting tool.

NON-ROUTABLE DOMAINS IN UPN'S

VIS for Office 365 also supports customers with either non-routable domains for a User Principal Name such as JoeUser@Optimal.local or multiple UPN suffixes. VIS for Office 365 handles this on-the-fly by translating on the out-bound sync and as the user authenticates to Office 365, with no data changes required in Active Directory. With VIS for Office 365, your cloud UPN and on-premise can be different.
