

# VIRTUAL IDENTITY SERVER FOR SHAREPOINT™

DEPLOY SHAREPOINT TO USERS  
RAPIDLY AND SEAMLESSLY

A Global Provider of Identity & Access Management Solutions

# EVERY DAY, MILLIONS OF USERS WORLDWIDE DEPEND ON OPTIMAL IDM SOLUTIONS FOR THEIR SECURITY, COMPLIANCE AND IDENTITY MANAGEMENT NEEDS.

## INTEGRATED WINDOWS

Can span multiple forests without the need for forest trusts.

## TWO-FACTOR AUTHENTICATION

e.g. Time-based One-Time Password (TOTP), PUSH, SecurID, Smart Card, USB Token.

## FORMS BASED AUTHENTICATION (FBA):

Can span multiple forests and multiple platforms such as: Active Directory (AD), or any data store.

## FEDERATION

Support via our STS standalone or integrated with AD FS.

## CAC AUTHENTICATION

Department of Defense, Common Access Card (CAC) authentication.

## DIGITAL CERTIFICATES

Seamless login via client certificates.

## IDM SOLUTIONS

Single Sign-On (SSO) with Identity Management solutions such as Sun Identity Manager, IBM Tivoli Identity Manager, Oracle Identity Management Suite (OIM/OAM), CA Site Minder, etc.

## Virtual Identity Server - SharePoint Integration

External (DMZ) SharePoint Deployed to External and Internal Users

### VIS Extends Microsoft's SharePoint Solution

- Virtual Static & Dynamic Groups enhance the security model providing a more robust and flexible model.
- Provides a complete audit and compliance solution with built-in auditing and reporting.
- Deploy SharePoint rapidly across multiple Active Directory forests without trusts

# VIS - SHAREPOINT INTEGRATION

FULL OFFICE  
INTEGRATION  
WITH SEAMLESS  
SSO EXPERIENCE  
FOR SHAREPOINT

SHAREPOINT  
USERS FROM ANY  
IDENTITY DATA  
STORE

RAPID AND EASY  
SHAREPOINT

# VIS FOR SHAREPOINT CAN REDUCE ADMINISTRATION UP TO 90%

## BENEFITS

### Significantly Reduces Administration

Utilizing VIS for SharePoint's Virtual Dynamic Groups and Virtual Auto-Groups significantly reduces the administration of a SharePoint deployment. Security is configured once and effective permissions within SharePoint automatically change as data changes within the environment.

### Increased Security and Governance

VIS for SharePoint further simplifies and increases the security within SharePoint by providing administrators a dynamic attribute-based access control security model for SharePoint.

Administrators are no longer required to manage security and group membership on an on-going basis. Instead, administrators define security once creating dynamic groups that are based on user based attributes. As the data changes on the user, so does the group membership. The security within SharePoint is now defined once and changes automatically, significantly reducing administration, increasing security and lowering the total cost of ownership (TCO).

### Multi-Repository Authentication

VIS for SharePoint enables organizations to rapidly deploy SharePoint to users regardless of the repository they reside. Using out-of-the-box adapters, VIS can authenticate and authorize users from a multitude of data stores, including all major LDAP directories (i.e. Active Directory, ADAM, AD LDS, Sun, eDirectory, etc.) and even databases.

### Claims Based Authentication & Authorization

Using VIS for SharePoint, claims can now be dynamic in nature. Claims can be configured by user attributes that exist in multiple data stores, such as other LDAP directories or even databases.

### Compliance, Auditing and Reporting

VIS for SharePoint includes a complete automated compliance engine that enables administrators to automate and secure their SharePoint environment. Additionally complete audit records and reports are built-in providing administrators the tools they need.

### People-Picker / Claims Provider

Federated SharePoint deployments do not include the ability to search for users/groups, but VIS for SharePoint provides the searching ability across all of your identity stores.
