Identity & Access Management

The Best Ways To Create a Zero-Trust Environment

Organizations can begin to trust users, devices and transactions starting with a high level of IAM services and support. The steps outlined in this whitepaper define how a Zero-Trust model is built on strong identity and access management solutions that balance the security needs of the enterprise with a frictionless user experience and how you can get there.

Maintaining Security When Employees Work Remotely

A recent survey revealed that about 70% of respondents were working remotely, and 50% expected the move to remote work to persist for at least six months. Whether your employees are fully remote or rely on a hybrid model, remote work security is crucial. Rigorous cybersecurity measures must be put in place to protect your employees and your internal operations.

Implement security tools such as:
- Firewall
- Multi-factor authentication
- VPN solution
- Password manager
- Endpoint detection and response (EDR) recommendation
- Up-to-date devices

101 Uses for a Virtual Directory

What if there were a way to 'join' all of your directory services into a single view, without consolidation, without creating another database or pushing and pulling directory identity data back and forth across the network in a never-ending process of synchronization? What if you could use a single interface to maintain a single entity (logon) across all connected disparate directory services – including hundreds of Active Directory (A.D.) forests? And what if you had access to the first cloud-based virtual directory service offering that can be hosted on any cloud platform including Azure, AWS and Google? Download the whitepaper to learn more.
